# Instructions

I still want you to work on this for NO MORE than 15 minutes.

Please do the following things:

- 1) Start the timer.
- 2) Begin with the top row and work the problems in order. Try your best not to skip any.
- 3) After FIVE minutes, pause for just a moment and put a star next to whichever problem you're working on.
- 4) After TEN minutes, pause again and put two stars next to whichever problem you're working on.
- 5) After FIFTEEN minutes, stop working. Put three stars next to the final problem.

Below, I want you to fill in the information for how many problems you completed after five, ten and fifteen minutes. Count up the problems in each row until you get to the first star. (Remember, each row has 12 problems.) Put the total here:

\* = \_\_\_\_\_

Then, count from the first star to the spot with two stars. How many total problems did you complete in ten minutes?

\*\* = \_\_\_\_\_

Finally, count from two-stars to three-stars. Put your total from the entire sheet right here:

\*\*\* = \_\_\_\_\_

If you finished the whole sheet in less than fifteen minutes, put your time here:

\_\_\_\_\_:
